

ENVIRONMENTAL PROTECTION AGENCY

APTI 435: Atmospheric Sampling Course

Student Manual

Table of Contents

Chapter 1: An Introduction to Atmospheric Sampling	1-1
1.1 Introduction	1-2
1.2 Sampling Train Design	1-2
References.....	1-5
Chapter 2: Basic Gas Properties and Mathematical Manipulations	2-1
2.1 Temperature	2-1
The Fahrenheit and Celsius Scales	2-1
Absolute Temperature.....	2-1
2.2 Pressure.....	2-3
Definition of Pressure.....	2-3
Barometric Pressure	2-3
Torricelli Barometer.....	2-4
Fortin Barometer	2-4
Aneroid Barometer	2-7
Pressure Transducers.....	2-8
Gauge Pressure.....	2-10
Absolute Pressure.....	2-10
The Concept of Pressure-Head	2-12
Dalton's Law of Partial Pressure	2-12
2.3 The Ideal Gas Laws	2-13
Boyle's Law	2-13
Charles' Law	2-13
The Law for Ideal Gases	2-13
Molar Volume.....	2-14
2.4 Gas Density	2-15
Standard Conditions for Atmospheric Sampling.....	2-16
Origin and Definition of Viscosity	2-16
Kinematic Viscosity	2-17
Liquid Viscosity versus Gas Viscosity	2-18
2.5 Reynolds Number	2-20
2.6 Summary of Useful Equations.....	2-22
Temperature	2-22

Pressure	2-22
Ideal Gas Law.....	2-23
Gas Density	2-23
Viscosity, μ	2-23
Reynolds Number	2-23
2.7 Units of Measurements	2-24
Recommended Units	2-24
Conversion Problems.....	2-26
References	2-29

Chapter 3: Air Measuring Instruments.....3-1

3.1 Introduction to Air Movers	3-1
Relationship of Air Movers to Other Sampling System Components	3-1
Air Mover Classification	3-2
3.2 Air Mover Selection Criteria.....	3-2
Pollutant Concentration and Sampling Time.....	3-2
Sampling Rate Required.....	3-3
Physical and Chemical Nature of Air to be Sampled	3-3
Portability of Air Mover.....	3-3
Air Mover Noise	3-3
Air Mover Maintenance	3-4
Resistance	3-4
Constant Flow Rate	3-4
3.3 Pumps	3-5
Definition and Classification.....	3-5
Positive Displacement Pumps	3-5
Centrifugal Pumps	3-7
“Driving Forces” for Pumps.....	3-9
Characterisitic Curves.....	3-9
Selecting a Pump.....	3-10
Pump Gauges.....	3-11
3.4 Ejectors.....	3-12
Principle of Operation	3-12
Driving Forces.....	3-13
Sampling Use of Ejectors.....	3-13
3.5 Liquid Displacers.....	3-13
Principle of Operation	3-13
Sampling by Use of Liquid Displacement.....	3-14
3.6 Air Displacers	3-14

Evacuated Flasks: Principle of Operation	3-14
Sampling by Use of Evacuated Flasks.....	3-15
“Plastic” Bags: Principle of Operation.....	3-14
Sampling by Use of “Plastic” Bags	3-15
3.7 Flow Rate Control	3-15
Control by Diversion.....	3-15
Resistance Control.....	3-16
Driving Force Control	3-16
3.8 Flow Rate for Sampling	3-16
Need for Control.....	3-16
Control Mechanisms	3-17
3.9 Air Measuring Instruments.....	3-18
Introduction	3-18
Types of Air Measuring Devices	3-18
Calibration.....	3-19
3.10 Volume Meters	3-20
The Spirometer (or “Bell Prover”)—Primary Standard.....	3-20
Displacement Bottle Technique—Primary Standard	3-22
Frictionless Pistons—Primary Standard.....	3-23
Automated Bubble Flowmeters	3-27
Automated Dry-Piston Flowmeters	3-28
Wet Test Meter (WTM)—Secondary Standard	3-28
Roots Meter—Secondary Standard	3-31
Dry Test Meter—Secondary Standard	3-33
3.11 Rate Meters.....	3-35
Variable-Pressure Meters—Head Meters	3-35
Variable Area Meters	3-38
Mass Flow Meters—Heat Transfer Meters—“Hot-Wire” Meters	3-40
3.12 Velocity Meters.....	3-41
Pitot Tube—Primary Velocity Standard.....	3-42
Standard Pitot Tube—Secondary Velocity Standard	3-43
S-Type Pitot Tube—Secondary Velocity Standard	3-45
Thermal Anemometer—Secondary Velocity Standard.....	3-46
3.13 Sample Problems	3-47
Problem 1: Volume Conversion to Standard Conditions	3-47
Problem 2: Orifice Conversion When Used at Other Calibration Conditions	3-47
Problem 3: Conversion for Different Gas Used with a Rotameter	3-48
Problem 4: Pump Capacity	3-49

3.14 Additional PM _{2.5} Flowmeters and Devices	3-50
Bubble Flowmeters	3-50
Piston Flowmeters	3-50
Mass Flowmeters.....	3-50
Orifice Devices.....	3-50
Laminar Flow Elements	3-51
Wet Test Meters	3-51
Dry Gas Meters.....	3-51
References	3-52

Chapter 4: Particulate Matter Sampling	4-1
4.1 Introduction	4-1
Principles of Inertial Collection.....	4-5
4.2 Inertial Sampling Devices.....	4-6
Impaction Devices	4-6
Impingement Devices	4-14
Centrifugal Separation Devices	4-14
Virtual Impactors—Dichotomous Sampler	4-16
4.3 Collection Efficiency and Penetration Efficiency of Inertial Sampling Devices	4-21
Definition of Collection Efficiency and Penetration Efficiency	4-21
Impactor Performance Characteristics.....	4-22
Properties of Aerosols Affecting Inertial Collection Efficiency ...	4-22
Properties of the Collecting Device Influencing Collection Efficiency	4-23
4.4 Limitations and Sources of Error in Inertial Collection.....	4-24
Inherent Errors in Sample Collection	4-24
Errors Associated with the Calibration of Collection Devices....	4-25
Errors in Sample Analysis.....	4-25
Size-Selective Inlets and Devices for Aerosol Sampling.....	4-25
4.5 Filtration Sampling	4-32
Introduction	4-32
General Considerations	4-32
The Theory of Filtration.....	4-33
Collection Efficiency of Filters	4-34
Characteristics of Filter Media	4-38
Sample Problems	4-54
4.6 Gravitational Sampling	4-55
Dustfall Bucket or Jar.....	4-55
Precipitation Collectors	4-55

4.7 Electrostatic Precipitators	4-56
Introduction	4-56
Principles of Electrostatic Precipitation	4-56
Collection Efficiency	4-57
Specific Applications	4-57
4.8 Thermal Precipitators	4-58
Introduction	4-58
Collection Efficiency and Deposition Pattern	4-58
Advantages and Disadvantages of Thermal Precipitators.....	4-59
4.9 Summary.....	4-59
References.....	4-60

Chapter 5: Methodologies and Instrumentation for Particulate Matter Sampling.....	5-1
5.1 Introduction	5-1
5.2 High-Volume Sampling for Suspended Particulate Matter (SPM) and Air Toxics.....	5-1
5.3 High-Volume Air Sampling.....	5-3
Introduction	5-3
Development of the High-Volume Sampler	5-3
Sampler-Shelter Combination	5-5
Filter Media for High-Volume Sampler	5-6
Precautions in Filter Handling	5-8
Calibration.....	5-10
U.S. EPA High-Volume Sampling Procedure for TSP.....	5-18
Sample Problems.....	5-22
Analysis of High-Volume Filters	5-24
Sampling Accuracy and Precision.....	5-25
Accuracy	5-25
Precision	5-30
Maintenance	5-30
Summary.....	5-32
5.4 FRM for the Determination of Particulate Matter as PM ₁₀	5-32
Applicability	5-32
Principle	5-32
Range	5-34
Precision	5-34
Accuracy	5-35
Potential Sources of Error	5-36

PM ₁₀ Sampler Apparatus	5-37
Filter Media	5-38
Calculations	5-38
Sample Problems	5-39
5.5 FRM and FEM for the Determination of Fine Particulate Matter as PM_{2.5}	5-41
Reference Methods for PM _{2.5} (FRM).....	5-41
Designated Methods for PM _{2.5}	5-45
Equivalent Methods for PM _{2.5} (FEM).....	5-46
Limitations of PM _{2.5} Reference and Class I Equivalent Methods.....	5-47
Approved Regional Methods (ARMs).....	5-48
Calculations	5-48
Sample Problems	5-48
5.6 FRM and FEM for the Determination of Coarse Particles (PM₁₀-PM_{2.5}).....	5-50
5.7 PM_{2.5} Speciation Sampling	5-51
5.8 Continuous <i>in situ</i> Monitoring for Particulate Matter ..	5-55
National Core (NCORE)	5-56
State and Local Air Monitoring Stations (SLAMS)	5-56
5.9 Automated Federal Equivalent Monitors.....	5-56
Beta Attenuation Monitor (BAM)	5-57
Tapering Element Oscillating Microbalance (TEOM [®])	5-58
5.10 Other Automated PM Methods	5-59
Mass and Mass Equivalent	5-60
Visible Light Scattering	5-61
Visible Light Absorption	5-64
Electrical Mobility	5-66
Multi-Elemental Analyzer	5-69
References	5-74
Chapter 6: Gaseous Sampling	6-1
6.1 Principles of Absorption	6-1
Introduction	6-1
Types of Absorption	6-1
Physical Absorption	6-2
Chemical Absorption.....	6-2
6.2 Collection Efficiency	6-3
Factors Affecting Collection Efficiency	6-3
Absorber Characteristics.....	6-3
Chemical Characteristics	6-4

Physical Characteristics	6-5
6.3 Determination of Collection Efficiency	6-5
Absorption Devices	6-5
Fritted-Glass Absorbers	6-6
Impingers	6-9
Summary.....	6-10
Current Applications of Absorption in Atmospheric Sampling ...	6-10
6.4 Principles of Adsorption.....	6-10
Basic Principles.....	6-10
Types of Adsorption	6-11
Variables Affecting Gas Adsorption	6-12
Adsorption Isotherms	6-13
Adsorbate Characteristics	6-14
Adsorbent Characteristics	6-16
Typical Adsorbents.....	6-17
Adsorption Losses in Air Sampling	6-19
Current Applications of Adsorption in Atmospheric Sampling ...	6-19
Summary.....	6-22
6.5 Selection and Performance of Wet Collector Media ..	6-23
Introduction	6-23
Solubility of Pollutant.....	6-23
Rate of Reaction	6-25
Collection Efficiency.....	6-25
Retention Characteristics of Absorbent (Solvent)	6-26
Retention of Gases and Vapor by Chemical Reaction	6-28
Retention of Particulate Matter.....	6-29
6.6 Principles of Grab Sampling.....	6-29
Introduction	6-29
Evacuated Containers.....	6-29
Air Displacement or Purging	6-33
Liquid Displacement.....	6-34
Inflation—"Plastic" Bag Sampling.....	6-34
Syringes	6-36
Grab Sampling Techniques.....	6-36
Current Applications of "Whole Air" (Grab and Integrated)	
Sampling in Ambient Air.....	6-36
6.7 Principles of Cryogenic (Freezeout) Sampling.....	6-36
Introduction	6-36
Concept.....	6-37
Equipment.....	6-37

Single-Stage Units	6-38
Multistage Units	6-38
Efficiency	6-40
Current Applications of Cryogenic (Freezeout) Sampling in Ambient Air	6-41
Summary	6-42
References	6-43

Chapter 7: Standard Methods for Criteria Pollutants

.....	7-1
7.1 Introduction	7-1
7.2 Reference Method and Equivalent Method	7-1
Criteria Pollutants and Measurement Methods	7-2
Particulate Matter	7-4
Ozone	7-6
Carbon Monoxide	7-7
Nitrogen Dioxide	7-7
Sulfur Dioxide	7-8
Lead.....	7-10
References	7-11

Chapter 8 : Introduction to Ambient Air Sampling for

Air Toxics	8-1
8.1 Introduction	8-1
What are Toxic Air Pollutants?.....	8-1
Clean Air Act of 1990	8-2
Timeline for Air Toxics Monitoring.....	8-3
8.2 What is Risk?	8-5
What is a Risk Assessment?	8-6
Hazard Identification	8-7
Weight of Evidence for Health Problems of Concern	8-7
Exposure Assessment	8-8
Dose-Response Assessment.....	8-8
Dose-Response Relationships.....	8-9
Risk Characterization.....	8-9
8.3 Introduction to Air Toxics Methods.....	8-10
Monitoring Program Goal and Objectives	8-10
Description of the Methods	8-13
Compendium Method TO-11A.....	8-14

Compendium Method TO-13A	8-16
Compendium Method TO-15A	8-18
Compendium Method IO-3.5.....	8-20
References.....	8-23

Appendix A: Statistical Techniques Employed in Atmospheric Sampling	A-1
A.1 Introduction	A-1
A.2 The Data Quality Objective (DQO) Process	A-2
The Seven Steps of the DQO Process.....	A-2
Outputs of the DQO Process	A-3
A.3 Data Collection Design	A-3
Data Plotting	A-3
A.4 Graphical Analysis	A-4
Frequency Tables	A-4
The Frequency Polygon.....	A-6
The Histogram	A-6
The Cumulative Frequency Distribution	A-8
Distribution of Data.....	A-9
Transformation of Data	A-9
The Logarithmic Transformation	A-10
Probability Graph Paper.....	A-11
Least-Square Linear Regression	A-12
A.5 Measures of Central Tendency	A-14
Arithmetic Average, or Mean.....	A-14
Median	A-15
Geometric Mean	A-16
A.6 Measures of Dispersion	A-17
The Range	A-17
Standard Deviation	A-18
Coefficient of Variation.....	A-19
Standard Geometric Deviation	A-20
A.7 Distribution Curves	A-22
The Normal Distribution	A-22
Lognormal Distributions	A-24
References.....	A-26

Appendix B: Glossary and Acronyms.....	B-1
B.1 Glossary	B-1

B.2 Acronyms.....B-28

Appendix C: Conversion Factors and Useful Information C-1

Appendix D: Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition..... D-1

Appendix E: Compendium of Methods for the Determination of Inorganic Compounds in Ambient Air E-1

Appendix F: Theory and Calibration Procedures for the Use of a Rotameter F-1

F.1 Nomenclature..... F-1

F.2 Description of a Rotameter..... F-2

F.3 Development of Flow Equations..... F-3

 General Flow Rate Equations F-3

 Computation of Reynolds Number F-5

F.4 Common Practices in the Use of a Rotameter for Gas Flow Measurement F-6

 Procedures for the Calibration of a Rotameter..... F-7

 A Universal Calibration Curve..... F-8

 Development of a Universal Calibration Curve F-9

F.5 Use of the Universal Calibration Curve for a Rotameter F-11

 To Determine an Existing Flow Rate F-11

 To Establish a Required Sampling Rate F-11

 To Predict Calibration Curves F-12

Appendix G: Significant Figures and Rounding Off G-1

G.1 Working with Numbers

 Intro Problems G-2

G.2 Approximate Numbers G-2

 Rule 1 (General) G-3

 Rule 2 (General) G-3

G.3 Rounding Approximate Numbers	G-3
Rule for Rounding Approximate Numbers.....	G-3
G.4 Adding and Subtracting Approximate Numbers.....	G-4
Truncating Approximate Numbers Following Addition or Subtraction.....	G-4
G.5 Multiplying and Dividing Approximate Numbers	G-5
Significant Digits	G-5
Truncating Approximate Numbers Following Multiplication or Division	G-6
G.6 Reasonability	G-8
Rule to Meet the Conditions of Reasonability	G-8
G.7 Practice Exercises	G-9
G.8 Answers to Intro Problems	G-10
G.9 Answers to Practice Exercises	G-11
